Affected QGIS version:	3.4.4	**Regression?:**	No
Operating System:	Linux Mint	**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	wontfix
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	29888

Description

Hi,
I'm trying to use the href html attribute in a map composer under Qgis 3.4.4-Madeira.
The issue: When using code [1] and exporting my map as .pdf, the text is colorized in blue but impossible to click on it.
When I change to code to [2], with the complete url as a "text", then it works. I provide an output showing this issue.
I don't know it has already been reported and/or still exists in more recent versions.

[1] Click here to see how to use HREF
[2] <a href="https://www.w3schools.com/tags/att_a_href.asp" target="_blank"> https://www.w3schools.com/tags/att_a_href.asp

History

#1 - 2019-05-20 02:57 PM - Alessandro Pasotti

- Resolution set to wontfix

- Status changed from Open to Closed

They are both not clickable to me.

I'm sorry but think this is a won't fix because of how the underlying libraries (QT) export data to PDF.

There is some ongoing work to support geopdf output but I don't know if that will be a game changer for this particular issue.
