Easy fix?:	No	**Copied to github as #:**	18732

Description

Running Debian Testing with Multiarch option (eg needed for Skype....)
https://wiki.debian.org/Multiarch/HOWTO

This means that my libpython2.7.so is in
/usr/lib/x86_64-linux-gnu/libpython2.7.so
and not in
/usr/lib

Not sure if this is Debian specific, but (though not trivial for me, I tried) it seems doable to add this
/usr/lib/i386-linux-gnu and /usr/lib/x86_64-linux-gnu/ to some search path?

(I manage anyway, because I know and add as a var in cmake. but...)
