Crashes QGIS or corrupts data:	No	**Copied to github as #:**	19106

Description

i know this is the most inefficient way to query for 4000 objects,but i don`t know how to search better

The query that i try to do is like this, but with 4048 objects

"objectid" = 198396 OR
"objectid" = 198380 OR
"objectid" = 198377 OR
"objectid" = 198370 OR

I have attached the query file

- Status changed from Open to Feedback

On Linux does not crash, but it freezes... but considered that something like

100 <= "osm_id" <= 198396

works with no issues, I would consider this a (so) edge case that I suggest to close this ticket as invalid.
