QGIS Application - Bug report #13542
Postgis view breaks Qgis Server WFS

2015-10-08 02:00 AM - Henrik Uggla

Status:	Closed		
Priority:	Normal		
Assignee:			
Category:	QGIS Server		
Affected QGIS version:	2.8.2	**Regression?:**	No
Operating System:	Ubuntu	**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	worksforme
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	21584

Description

I've created a view in Postgis 9.3 like this:
SELECT table1.id, table2.geom FROM myschema.table1 JOIN myschema.table2 USING (joincol);
Where id is unique, public has all privileges and only containing point geometries.

When I add this view to a Qgis Server project, and publish it as WFS, GetCapabilities gives me "Internal Server Error". If I remove the view or unpublish it for WFS, GetCapabilities works again. The view is correctly displayed in Qgis Desktop.

History

...and table1 has no geometry.

#2 - 2016-09-10 01:21 AM - Tudor Bărăscu

Adding some test data to your issue would greatly improve your chances of getting noticed.
All the best

#3 - 2017-03-07 02:51 AM - Giovanni Manghi

- Status changed from Open to Feedback
- Priority changed from High to Normal
- Target version deleted (Future Release - High Priority)

Works like a charm here on Ubuntu 16.04 and QGIS 2.18.4

Please leave feedback.
