QGIS Application - Bug report #12918
QGIS freezes when wheelzooming WMS layer via authenticating proxy

2015-06-09 02:58 AM - johanvdw -

Status:	Closed		
Priority:	High		
Assignee:			
Category:	Map Canvas		
Affected QGIS version:	2.8.2	**Regression?:**	No
Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	not reproducable
Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	21003

Description

Note that this issue is very similar to a bug which was reported on the mailinglist (I have not found it in trac):
http://lists.osgeo.org/pipermail/qgis-developer/2015-May/037744.html

When using the wheelmouse to zoom in qgis and an authenticating proxy is used, qgis freezes and must be killed. When using a non-authenticating proxy such as cntlm the problem does not occur.

Tested on windows. This affects at least versions 2.6 and 2.8.2

History

#1 - 2017-03-08 12:49 AM - Giovanni Manghi

- Crashes QGIS or corrupts data changed from No to Yes

- Priority changed from Normal to High

- Status changed from Open to Feedback

- Category set to Map Canvas

Hi, is this still an issue in latest qgis releases as 2.18.4 or qgis3/master?

#2 - 2017-04-29 05:40 AM - Giovanni Manghi

- Resolution set to not reproducable

- Status changed from Feedback to Closed

Closing for lack of feedback, please reopen if necessary.
