**Description**

Hello,
I'm using plugin eVis on QGIS 2.12.1, os win 10. If I make database conections to MS Access or MS SQL and then import some data to QGIS I get a mesh. I use CP win1250. Character like "ŠČŽ" become "&$%" so I thing there is a problem with UTF8? If is there use of function str() maybe unicode() will be better? Just guess.
Thanks.

*- Status changed from Open to Feedback*

Could you try with QGIS 2.14. The new gdal should resolve your problem.
