

QGIS Application - Bug report #17444

GeoNode data provider completely ignores authentication

2017-11-13 09:58 AM - Alessandro Pasotti

Status: Closed	
Priority: High	
Assignee:	
Category: Data Provider/GeoNode	
Affected QGIS version: master	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution:
Crashes QGIS or corrupts data:	Copied to github as #: 25341
Description	
Authentication implementation in GeoNode provider is completely missing, the GUI is in place but connected to nothing.	
QgsGeoNodeRequest::requestUrl is probably the place where authentication should be injected (there are plenty of examples in the other providers).

I have added a proposed fix for this here: <https://github.com/qgis/QGIS/pull/5634> which hides the auth group box for GeoNode connections.
