QGIS Application - Bug report #16135
Selection by layerid instead layername from .gdb

2017-01-31 12:17 AM - Pablo Barrera

Status:	Closed		
Priority:	High		
Assignee:			
Category:	Data Provider/OGR		
Affected QGIS version:	2.18.13	**Regression?:**	Yes
Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	fixed/implemented
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	24047

Description

After add features from geodatabase, the source layer is root/.gdb|layerid=12 instead root/.gdb|layername='roads', creating a uncertanly cause the number will change every time you edit the gdb, and the qgs still selecting #12 when the real feature is another number.

- Easy fix? set to No

#6 - 2017-06-06 03:46 PM - Sandro Santilli

It was reported that the behavior was changed for some reason: #15698-14

If I understand that thread correctly I fixed the provider to use names again but then Alexander Bruy changed it back, so I hope he can help figuring out the way ahead now.

- Status changed from Open to Feedback

- Affected QGIS version changed from 2.18.4 to 2.18.13

Hi, I see this is still true on 2.18.13, could you explain how to trigger the change of layerid for one layer? I tried but wasn't able to. Thanks in advance.
