QGIS Application - Feature request #16751
open jpeg images with GPS EXIF as points

2017-06-24 08:35 AM - Andrew Harvey

Category:	Vectors		
Pull Request or Patch supplied:	No	**Resolution:**	duplicate
Easy fix?:	No	**Copied to github as #:**	24650

Description

When you drag and drop a .jpg image into QGIS it opens it as a Raster, however if the JPEG has a GPS coordinate in its EXIF metadata then I think QGIS should load it as a vector point at that location rather than a raster.

I've only tested this in QGIS 2.14, but I couldn't find any existing issues which address this.

PS. I'm not sure the best category, but I couldn't leave it blank.

duplicate of #6180

this is something you can meanwhile to achieve with the photo2shape plugin, or also the tag and geotag photos ones.
