

QGIS Application - Bug report #17979

Interface customization "Save to file" don't save

2018-01-26 09:48 PM - Thomas Gratier

Status: Closed	
Priority: Normal	
Assignee:	
Category: GUI	
Affected QGIS version: master	Regression?: Yes
Operating System: Ubuntu 16.04 64 bits	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: fixed/implemented
Crashes QGIS or corrupts data: No	Copied to github as #: 25875
Description	
<p>When I do "Settings" > "Interface customization", I tick "Enable customization". Then, I untick some boxes to remove some layers types in the "mAddLayerMenu". I've restarted QGIS to see these changes effects.</p> <p>So, everything is fine until this step (see attachment "Interface Customization").</p> <p>Then, I click on "Save to file", choose a directory to save, a file name ending with .ini and then I do "Save" (See "Choose a customization INI" attachment) I expect to find a file in /home/thomasg/www/ named qwerty.ini and it's nowhere.</p> <p>Can you reproduce? If yes, from my viewpoint, it's a regression compared to 2.18.x series.</p> <p>PS: I'm using QGIS 2.99 using UbuntuGIS packages with QGIS nightly repository.</p>
