Description

Would be nice to have in the prepare-commit script a check that a colon character is followed by a blank space before any other character (unless it's a breakline). This will improve readability of messages displayed in Gui (either in English or translated). Note in some cases spacing should be avoided (connection credentials) or ignored (debug messages), reason why translatable strings are the target. See for example fixes in commit:cd178325d7538f9b2aa2d9a13352d91933c02850 (maybe there are other types of fixes in the pr that could be automated).
