**Description**

I used master 2.99 version for some time and first build which I use for 1 month was very stable and responsive. However, recently I just update to current build (626781a) and it has a lot of stability issues. One of the problem is crashing of the QGIS during editing print layout (change map frame, adding new polygon and etc.). Rest of problem I would describe in another ticket.

Below error code after crash:

Composer is just about to be removed. Can you test using layouts instead?

OK but how to do it? In Project menu there is only New Print Composer option, there is no anything like "Layouts".

**#4 - 2018-01-02 08:53 AM - Harrissou Santanna**

@Michal, while there's from memory one entry in the Project, you might have two entries on the associated toolbar, one opening the print composer and the second one tbe layout.

Thanks for clarification. I tried new Layouts, however there is exactly the same problem there. Adding rectangle crashes QGIS. Below error message.

*- Subject changed from Crush during editing layout in Print Composer to Crash during editing layout in Print Composer*

I just want to informant that in today's fresh build the problem is still the same and it applies to both, print composer and new layouts.

Is this a custom build? This looks very much like a local issue

**#9 - 2018-01-15 07:01 AM - Michal Jurewicz**

I installed it via Homebrew qgis3-dev formula (as I always do for installing QGIS 2.99).

#### #10 - 2018-01-15 07:38 AM - Michal Jurewicz

I just verified that versions installed via MacPorts have the same issue.

#### #11 - 2018-01-16 07:40 AM - Michal Jurewicz

I made additional tests and it look like some problem specific to MacOS. Results from my test looked like that:

Native MacOS High Sierra 10.13.2 fresh QGIS master build via homebrew formula - problem occurs
Native MacOS High Sierra 10.13.2 master build (2018-01-10) installed via MacPort - problem occurs
Native MacOS High Sierra 10.13.2 master build (2017-12-27) installed via MacPort - problem occurs
Fresh installs (homebrew and macports versions) on also fresh virtualised MacOS High Sierra 10.13.2 - problem occurs
Current Master on virtualised Windows 10 - works OK

The only difference between results on MacOS was that it crashed after different number of added rectangles.

In build revision 96d1ea5 problem still exist. I can't try newer build because homebrew formula is broken.

#### #14 - 2018-01-25 12:05 AM - Nyall Dawson

My suspicion is that there's something broken in one of the underlying libraries in the homebrew build. There's a lot of random OSX only crashes reported lately which appear to be from deep in the Qt library.
