Affected QGIS version:	master	**Regression?:**	Yes
Operating System:	Linux Mint 18.3 Cinnamon	**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	duplicate
Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	25992

Description

In QGIS 2.99/3 ec86fcb, selecting layer properties (from main menu or right-click menu on layer) completely freezes QGIS program. Not sure if related, but removing items from most recent list crashed QGIS (twice), as did later simpling selecting the Database menu (once). In short, there seems to be some severe stability issues introduced in this build that I didn't encounter before.
