QGIS Application - Bug report #3142
ubuntu grass dependency (Ubuntu Maverick)

2010-10-21 02:14 AM - olivier -

Status:	Closed		
Priority:	Low		
Assignee:	nobody -		
Category:	Build/Install		
Affected QGIS version:		**Regression?:**	No
Operating System:	Debian	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	wontfix
Crashes QGIS or corrupts data:		**Copied to github as #:**	13202

Description

The qgis-plugin-grass package from http://qgis.org/debian-nightly depends on GRASS 6.4.0 RC6 (grass640+42329) while the final version (grass) is out and available on [[UbuntuGIS]] repository...

As a result, since I have the stable version of GRASS installed, I can't install QGis' plugin.

History

#1 - 2010-10-21 05:58 AM - Jürgen Fischer

- Resolution set to wontfix

- Status changed from Open to Closed

The nightly builds only use the "official" repositories from debian and ubuntu - mainly to test if qgis builds there. For everything else I'd recommend building own packages (which should work fine with packages from ubuntugis).

#2 - 2010-10-21 09:01 AM - olivier -

you could make it depend of grass640+42329 OR grass (>= 6.4.0)
