QGIS Application - Bug report #9114
Ellipse renderer always draws black ellispes in combination with color functions

Description

In other renderers, it is possible to us color functions such as color_rgb(100,255,255) to change the fill and outline colors.
The ellipse renderer only returns black ellipses if used with these functions.

The only thing that seems to work for ellipse renderers is the '#ff0000' notation.

Tested with today's nightly on Win7 but seems to affect all platforms.
