This is caused by an incorrectly translated string. What locale are you using?

I have the same crash, uf I using the Geometry Checker Plugin, The Plugin crashed after gnerating the new layer for checked feature. I can post screenshots tomorrow morning.

It's work in 3.0 and 3.2

In QGIS 3.4.1, french translation file contains an incorrect translation string in context DlgSqlWindow.

English string :{0} rows, {1:.3f} seconds

French string :{0} enregistrements, {1:.1f} secondes {0}? {1:.3f?}

QGIS 2.18 looks ok :

English string :

%d rows, %.1f seconds

French string :

%d lignes, %.1f secondes

So this is just a translation issue (QGIS in EN not affected?).

I didn't test in english but I believe so.
