Crashes QGIS or corrupts data:	No	**Copied to github as #:**	16295

Description

QGIS doesn't show my custom form after assigning it through layer.setEditForm("form.ui").
If I go to the layer's properties (Fields) and select Attribute editor layout = "Provide ui-file", I can see a correct path to my UI form. If I click OK now, to save settings and try to add a new feature, the form pops up as it used to be with version 1.8

You need to also change the editor layout.

```
layer.setEditorLayout( QgsVectorLayer.UiFileLayout )
layer.setEditForm('form.ui')
```
