QGIS Application - Bug report #7595
QgsProject writeEntry not safe

2013-04-13 12:13 AM - Denis Rouzaud

Status:	Closed		
Priority:	Normal		
Assignee:			
Category:	Project Loading/Saving		
Affected QGIS version:	master	**Regression?:**	No
Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	16525

Description

QDomDocument::createElement (const QString & tagName)
If tagName is not a valid XML name, the behavior of this function is governed by QDomImplementation::InvalidDataPolicy

http://doc.qt.digia.com/4.6/qdomimplementation.html#InvalidDataPolicy-enum
Default behaviour seems that data are stored anyway.

If a plugin messes up with this, the project file is not readable anymore.
