Description

I'd like to see a feature added that allows you to use a coverage layer multiple times in the one map sheet.

I have a map grid over the extents of the municipality and I produce a mapsheet for each grid cell.
In the title block I have a 9 block grid where the center cell always represents the current map and each of the other 8 grid cells display the adjoining map numbers. At present I can only get Atlas to cycle through one or the other 'Map Items' but not not both.

See images attached.
