The grid and the its snapping options (spacing, offeset, etc.) are not enough?

For large paper formats (A2 and up) grid is CPU-wasting and poorly usable. In my opinion having rules an customizable handles (as in inkscape) will be a more efficient way..

I have an implementation of composer rulers in the branch https://github.com/mhugent/Quantum-GIS/tree/composer_ruler

It needs a bit of polishing, but maybe it is ready before the 2.0 feature freeze...

That looks good. Can we get it merged?

#9 - 2013-03-17 01:29 AM - Marco Hugentobler

There are two small fixes to do before merge:

- hide snap lines before printing
- zoom to full causes a shift between rulers and composer content

I am hoping for this for a while! This would make my life easier, any way I can try it out? I'm no developer so wouldn't know how to install or something
