

QGIS Application - Feature request #3196

Provide a custom SVG path in an environment variable

2010-11-10 05:05 AM - luca76 -

Status: Closed	
Priority: Low	
Assignee:	
Category: Symbology	
Pull Request or Patch supplied:	Resolution: fixed/implemented
Easy fix?: No	Copied to github as #: 13256
Description	
<p>Hi,</p> <p>in an enterprise environment with shared projects it would be useful to have set an environment variable pointing to a custom SVG path (in a shared network folder).</p> <p>There is already an env var for python plugins, QGIS_PLUGINPATH.</p> <p>The env name could be QGIS_SVGPATH</p>

- % Done changed from 0 to 100

Hello, bug triage...

in QGIS 2.13 master (and previous versions), there is now a way to add paths for SVG symbols. It is located in the Settings -> System tab. You can add as many paths as you want. Furthermore, this configuration is stored in QGIS settings (.ini for GNU/Linux and register for MS-Windows), so you can easily modify it as a sysadmin in an enterprise environment or deploy it to a lot of configurations.

There is no environment variable for this but you've got a way to set the SVG path in your environment so, I am closing this feature request.
