

Hi,

I'm trying to use the href html attribute in a map composer under Qgis 3.4.4-Madeira.

The issue: When using code [1] and exporting my map as .pdf, the text is colorized in blue but impossible to click on it.

When I change to code to [2], with the complete url as a "text", then it works. I provide an output showing this issue.

I don't know it has already been reported and/or still exists in more recent versions.
