

## QGIS Application - Feature request #10020

### Suggestion - change cursor to "busy" while calculating min/max range for raster layers

2014-04-08 02:05 PM - Steven Kay

| GUI/UX suggestion :)  |                                     |
| I often work with large rasters. When getting the max/min range for a large raster, this can take some time to calculate, and it's difficult to tell when the process has finished. |                                     |
| e.g.  |                                     |
| Layer Properties > Style > Load Min/Max Values [Min/Max, Full, Actual] , Load   |                                     |
| It'd be great if clicking on the Load button changed the cursor style to "busy" during calculation to give feedback that QGIS hasn't crashed, it's just busy doing its thing.       |                                     |
