QGIS Application - Bug report #10021
Pointer Offset

2014-04-08 05:44 PM - Thomas McAdam

Status:	Closed			
Priority:	Normal			
Assignee:				
Category:	Digitising			
Affected QGIS version:	master	**Regression?:**	No
Operating System:	Windows	**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	end of life
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	18507

Description

When digitising (creating new features) there is a small offset between the pointer (black cross with white circle) and the colored (thicker) cross that follows it around. This occurs even when it is stationary. I can't capture this problem with a screen grab.

History

I'm having the same issue. Here is a photo of the screen showing the offset. It changes and occasionally corrects its self if you click on and off the map window or change layers, etc.
