QGIS Application - Bug report #10043
QGIS 2.2 not rendering svg correctly

2014-04-10 02:24 AM - Admire Nyakudya

Status:	Closed			
Priority:	Normal			
Assignee:				
Category:	Symbology			
Affected QGIS version:	2.2.0		**Regression?:**	No
Operating System:			**Easy fix?:**	No
Pull Request or Patch supplied:	No		**Resolution:**	invalid
Crashes QGIS or corrupts data:	No		**Copied to github as #:**	18524

Description

I have vector data that I have styled using svg symbols generated in inkscape and gimp and QGIS 2.2 does not show the correct svg symbol on the map.
The svg symbols appear as a ? mark all over the map and when I try to style the same vector layer using QGIS 2.0 it draws the correct svg symbol.
I have tried to copy the svg file from my home directory to the one where QGIS stores it default svg symbol and I noticed that once it is in my home folder it is the correct symbol but when i gets to the QGIS folder it becomes a ? mark. I am running Ubuntu 13.10

I have attached the two png images that shows the above scenario

History

#1 - 2014-04-10 02:48 AM - Admire Nyakudya

- File trace.txt added

I am using Ubuntu 13.10 and the stack trace from when I start QGIS from the terminal is attached below.

#2 - 2014-06-21 02:39 AM - Jürgen Fischer

- Category set to Symbology

#3 - 2015-10-10 03:31 AM - Nyall Dawson

- Resolution set to invalid

- Status changed from Open to Closed

Please test with QGIS >= 2.8 and if it's still reproducable, open a new issue and attach your svg image.
