QGIS Application - Feature request #10054
Using of postgis tables in batch mode

2014-04-11 07:28 PM - stefano campus

Status:	Closed		
Priority:	Normal		
Assignee:	Victor Olaya

Pull Request or Patch supplied:	No	**Resolution:**	fixed/implemented
Easy fix?:	No	**Copied to github as #:**	18533

Description

I have to make massive operations of "intersect" between postgis layers and one simple area of extraction (shape file).
I was thinking of using a module of Processing (in particular the "shapes cut" saga module) in batch mode.
I immediately stopped because all operations can be performed only on data sets that exist on the file system (shape, kml, etc.) so I can not use postgis tables directly.

so it could be very useful if all operations in batch mode could be performed not only with shape files et similia.

thank you

stefano
