QGIS Application - Bug report #10089
Output of statistics: please add layer and column names

Crashes QGIS or corrupts data:			**Copied to github as #:**	18557

Description

The command Vector > Analysis tool > Statistics does not return, as header, the name of the layer and that of the variable analysed. This is not a big issue in direct usage, but becomes a serious limitation when the alg is used in Processing, as the output is saved without any clue about what it refers to.
Seems a trivial and useful addition.
