

QGIS Application - Bug report #10097

Activating or deactivating a layer makes QGIS refresh WMS layers

2014-04-21 07:04 AM - Filipe Dias

Status: Closed	
Priority: Severe/Regression	
Assignee:	
Category: Web Services clients/WMS	
Affected QGIS version: master	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution: duplicate
Crashes QGIS or corrupts data:	Copied to github as #: 18565
Description	
Activating or deactivating a layer (or changing it's symbology) makes QGIS refresh WMS layers. This affects QGIS Master didn't happen in QGIS 2.2.

- Resolution set to duplicate
- Status changed from Open to Closed

This is expected behaviour if the render caching is disabled. You can enable it in menu Settings > Options > Rendering > Use render caching where possible to speed up redraws.
