Hi Filipe,

I cannot confirm.

If you are asked to choose a folder as output, then it means that the "create vrt" option is active, this means that the output will be a .vrt instead of a .tif

If it is not really working for you then it can be data/projection related, please attach sample data.

"Create vrt" was not activated. I'm attaching a sample raster. Just try to do "save as".

then it asks for you for a target/output file, not folder

It wasnt working because I hadnt pressed the "layer extent" button. I don't think this is the right behaviour from the user point of view, QGIS should select the layer extent by default.
