

QGIS Application - Bug report #10188

Postgresql connection with i18n characters in either username or password fails.

2014-05-06 06:41 AM - Csaba Sandor

Status: Closed	
Priority: Normal	
Assignee:	
Category: Data Provider/PostGIS	
Affected QGIS version: 2.2.0	Regression?: No
Operating System: Windows	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: end of life
Crashes QGIS or corrupts data: No	Copied to github as #: 18641

Description

When I try to connect to Postgresql server with my user and pass containing i18n chars I get "password authentication failed" and the username wrongly encoded in the error message. Special chars replaced by a '?'.

Schemas, tables with i18n chars are properly displayed in QGIS.

I can connect successfully with same credentials from:

- command line on Ubuntu Server
- pgAdmin III from my Windows box

QGIS 2.2 on Windows 8.1 from OSGEO4W

Postgresql 9.1 on Ubuntu Server 12.04

Side note: I think I have to allow special characters in username as I authenticate against AD through LDAP based on CN not UID.
