

QGIS Application - Feature request #10284

Database relations: for 1:1 relations it should be possible to mix the widgets in the form

Easy fix?: No	Copied to github as #: 18713
Description	
<p>For more complex applications there are often 1:1 relations. In such a case it should be possible to mix the widgets from the parent table and the mixed table. Currently, one can only embed full tables or forms and not individual widgets.</p> <p>Use case/example:</p> <ul style="list-style-type: none">- mast table waste-water structure has a 1:1 relation with a manhole table. In the form one should be able to mix the widgets of the waste-water structure table with the widgets of the manhole table.	

History
