Easy fix?:	No	**Copied to github as #:**	18715

Description

In 1:1 mode the UI should behave as follows:

  - only the form will be displayed (no table, no feature list)
  - the plus-button will be removed, link would replace existing links

In object-relational mode when the same parent table is referenced from multiple child tables of different types (e.g. structure_part referenced by child table cover, access_aid, dryweather_flume, etc.). The type of the parent record is specialed from exactly one matching child record (e.g a structure_part can be of type cover, access_aid, etc.). UI wise we would split the layout. E.g. on top one would list the parent records and at the bottom the specialized child records.
