Description

hello,

it would be helpful if you could to select objects/features with the identify tool (screenshot).

- the selection should be additive
- additional it would be nice if you could deselect the object/feature with a second context menu entry

useful if there are duplicate geometries and i want to select the right one...for instance to delete the right one

this functionality is comparable to that in arcgis.

thank you for your great work nathan!:-)

Jan
