Crashes QGIS or corrupts data:		**Copied to github as #:**	18758

Description

Subject says it all. It's impossible to add new features to layers being edited via the Add Feature button. The user can draw the polygon, but when its time to insert the column(s) data, everything is disabled except cancel.

Steps to reproduce:
1. Create a new project, and add a newly created polygon shapefile to it with two columns (any type, doesn't matter)
2. Switch the edit mode on for the shapefile layer
3. Trace a new polygon to the layer via Add Feature button
4. Use right click to end tracing of the polygon, and notice how the pop up dialog has all of the fields *and* the OK button disabled, preventing the insertion of the traced polygon

That must be a pretty recent regression.
