QGIS Application - Bug report #10339
crash regression (layer refactoring) when dragging a layer at the very top of the layers list

2014-05-23 10:45 PM - Mathieu Pellerin - nIRV

Status:	Closed		
Priority:	Severe/Regression		
Assignee:	Martin Dobias		
Category:			
Affected QGIS version:	master	**Regression?:**	No
Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	
Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	18760

Description

Steps to reproduce:

1. Create a new project

2. Add two layers (same data source) to the project

3. Select the last layer from the layers' list and drag it *below* the first layer (so visually it stays the same)

4. Using the same last layer, drag it *above* the first layer

4 **Boom** crash :)

Regression caused by the layer refactoring.

Associated revisions

Revision 2c51dcb7 - 2014-05-25 06:17 PM - Martin Dobias

Fix #10339 (crash when reordering layers)

This was caused by the recent addition of currentNode handling in model.

Changed to use persistent indices which are auto-updated when model changes.
