Description

QGIS crashes when a project with invalid layer is opened.
Steps to reproduce:
  - create a project
  - move/rename the data or edit data source name in project
  - open the project and click 'Cancel' when asked to select datasource
  - click by right mouse button on the invalid layer

Fix #10343 (legend crash with invalid layer)

Fixed the crash itself in the context menu, but also changed the behavior
to remove any invalid layers from project as currently there is no mechanism
for postponing handling of invalid layers after project load
