

QGIS Application - Bug report #10347

No layers in QGIS server GetCapabilities

2014-05-25 12:06 PM - Radim Blazek

Status:	Closed	
Priority:	Severe/Regression	
Assignee:	Martin Dobias	
Category:	QGIS Server	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution:
Crashes QGIS or corrupts data:		Copied to github as #: 18768
Description		
<p>There are no layers in QGIS GetCapabilities response with projects files saved by latest master. It works with old project files.</p> <p>It was probably introduced by new legend, it works with commit:7f218c7 and it does not with commit:439065d.</p>

[layertree] Fix #10347 - save also old <legend> tag

QGIS server does not use QgsProject for loading of QGIS project.

In order to allow reading of new projects, let's also write the original <legend> tag to the project.

Ideally the server should be ported to new layer tree implementation, but that requires non-trivial changes to the server components.

The <legend> tag is ignored by QGIS application in >= 2.4 and this way also the new project files can be opened in older versions of QGIS without losing information about layer groups.

History

#1 - 2014-05-26 10:42 PM - Martin Dobias

- Status changed from Open to Closed

Fixed in changeset commit:"2df8f8c11ec3c3923a14c36114e06f3ef141458a".

#2 - 2014-05-26 11:16 PM - Marco Hugentobler

I'm planning to port the server code to project/layertree in the mid-term (ideally shortly after 2.4 is out).

#3 - 2014-05-27 12:12 AM - Martin Dobias

Sounds great!

#4 - 2014-05-27 12:13 AM - Martin Dobias

- Affected QGIS version changed from 2.2.0 to master
