QGIS Application - Feature request #10387
change default label font

2014-05-29 01:28 AM - matteo ghetta

Status:	Open		
Priority:	Normal		
Assignee:	Larry Shaffer		
Category:	Labelling		
Pull Request or Patch supplied:	No	**Resolution:**	
Easy fix?:	No	**Copied to github as #:**	18804

Description

It would be great to have the possibility to set the default font of the label just like one can set the font of the print composer.

This should avoid boring problems when exporting projects to machines with different OS.

There are two things that can be done here:

- Allow setting the default label font, as per this feature request
- Offer a decent cross-platform default font, similar to how the "new test font is made auto-available":#34be93b8

It is good to offer the ability to override the default font, but important to offer a good cross-platform font. This is in contrast to Issue #8072, which is to offer good default fonts specific to a platform.

A significant reason to have a cross-platform font, is because the desktop environ may be significantly different than the server, e.g. Mac or Windows -> Linux. Ensuring there is at least one similar default font will go a long ways towards resolving cross-platform deployment of projects, desktop-to-desktop and desktop-to-server.

Currently, the default font is that which Qt defines as default for the platform.
