

QGIS Application - Bug report #10410

New Identify Results panel: first field of features empty when using html tooltip

2014-06-01 01:40 PM - Harrissou Santanna

Status: Closed	
Priority: High	
Assignee:	
Category: GUI	
Affected QGIS version: 2.2.0	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution:
Crashes QGIS or corrupts data:	Copied to github as #: 18826
Description	
<p>Hi,</p> <p>I don't find an expressive title but follow these steps and you'll understand.</p> <p>Open the "properties of vector layer" dialog. go to "Display" tab check the "html" checkbox and add an expression. Maybe you should just add one of your fields. Press ok Now, select Identify tool and click on several features in your layer. In the Identify Results dialog, the first row shows the name and number of your layer. its child that used to show first attribute of the feature is empty. I think that, if this row doesn't show the expression used in html (and I understand it doesn't), it may show at least the field greyed in Display Tab.</p>
