

## QGIS Application - Bug report #10415

### Identify Results panel resizes when deleting the selected feature

<b>Description</b>  these are the steps: Toggle editing a layer Identify a feature with the Identify tool Then select and delete it, without having cleared identify result. The "Identify Results" panel automatically resizes its width as there is no more data to show. And this change narrows (too much?) the width of others panels like Map Legend.  I think the "Identify Results" panel width should be the one decided by the user.		

#### Associated revisions

Revision cdc235f9 - 2014-06-17 08:15 PM - Jürgen Fischer

identify results: don't close dialog when last feature/layer is removed (fixes #10415)
