[layouts] Fix multiframe items (tables, html) cannot be pasted

Fixes #10456, #17882

History

#1 - 2014-11-17 02:55 PM - ramon .

Its probably worth mentioning that as a work around, you can select the html frame you want, and then press the "Add Frame" button that is in the Item Properties tab, a new identical frame is created.

Unfortunately, this copy is completely identical, so i.e. you can't set different filter for this copied table. And the content is identical also.

In general, it's not clear what this "Add frame" button does.
