Hmm. Works fine here on Mac with latest master; using .shp file with UTM coords, with X/Y fields of:

    Type   = double
    Type name = Real
    Length   = 20
    Precision = 8

Can you give more details, please?

#2 - 2014-06-05 03:46 AM - Giovanni Manghi

- Status changed from Open to Closed

- Resolution set to worksforme

- Affected QGIS version changed from 2.2.0 to master

just compiled the latest code on Ubuntu and it works.

#3 - 2014-06-05 11:01 AM - Larry Shaffer

Giovanni, we should wait for the original reporter to respond before just closing a ticket. At least give them a day or so. There may still be a bug here, but not present in our setups.

Thx Larry,

I tested today and still had the issue, but got messed into several other bug (I'm deploying QGIS 2.2 and postgres 9.3 in the same time.. bad timing fo a

good test of 2.3)

Will check tomorrow why the issue remains.

Hi Regis, are you using postgis for the tests? if yes what datatype are you using for the column for the data defined label visibility?

#7 - 2014-06-06 12:40 AM - Regis Haubourg

Hi

I confirm the issue. I have a memory layer here with a integer field for label show storage. When using labeling toolbar, no value is written in attribute table. When modifying attribute table by hand, the label is shown/Unshown correctly.

I you want to reproduce, just load easycustomlabeling plugin, duplicate a layer and play with it.

Cheers

Régis

Hi Regis, I just tested this steps (with the easycustomlabeling plugin) and here it works fine.

#10 - 2014-06-14 06:10 AM - Giovanni Manghi

a recent test shows that this features works so maybe this can be closed, anyway Regis has yet to leave feedback.
