Description

In the Atlas tab, the expression builder used to create the name for the output files, doesn't work until you check and uncheck "Single file export when possible".

How to reproduce:

1. Open a vector file
2. Create a new Print Composer and enable the Atlas Generation
3. Choose the vector file as coverage layer
4. The Expression Builder icon right to the "Output Filename Expression" is disabled
5. Check and uncheck "Single file export when possible" to enable the icon
