

QGIS Application - Bug report #10522

Data-defined symbology not working with field names that are valid expressions

2014-06-10 05:21 AM - Martin Dobias

Status: Closed	
Priority: Normal	
Assignee:	
Category: Symbology	
Affected QGIS version: 2.2.0	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution: fixed/implemented
Crashes QGIS or corrupts data:	Copied to github as #: 18932
Description	
<p>When using a field name that is also a valid expression (e.g. "a - b"), the field name is understood to be an expression - which is not always the case.</p> <p>The GUI should provide automatic quoting of such fields. This affects both data-defined symbol layer properties and size scale / rotation field of renderers. Labeling is not affected.</p>	

History

#1 - 2015-06-14 09:19 PM - Nyal Dawson

- Status changed from Open to Feedback

Should be resolved in master now - can you confirm?

#2 - 2015-06-23 08:09 AM - Martin Dobias

- Resolution set to fixed/implemented

- Status changed from Feedback to Closed

Indeed, this is fixed in master.
