

QGIS Application - Bug report #10536

The toggle editing pencil becomes orange without changing values of the layer

2014-06-10 09:18 AM - Harrissou Santanna

Status: Closed	
Priority: Normal	
Assignee:	
Category: Digitising	
Affected QGIS version: 2.0.1	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution: fixed/implemented
Crashes QGIS or corrupts data:	Copied to github as #: 18944
Description	
<p>Toggle editing a layer Click with the Identify tool on an unique feature so that you get the feature Attributes form Press OK No change has been made in the table but the yellow pencil near the layer name becomes orange. I always thought orange pencil meant that there were changes in the table waiting to be saved. Was i wrong?</p> <p>Testing on QGIS 20. and 2.2 shows that this behavior has always been in the new API. But i'm wondering if, as there are two colors, one shouldn't be for layer being edited (with changes) and the other one for layer just toggled editing. Bug or new feature?</p>

Another thing is that when you want to stop the editing mode (without changing values), you get a dialog asking you if you want to save or not your changes (although you made no change). That's confusing. As there is no change, toggling out editing mode should just close "editing mode" without question. This was the behavior in QGIS<2.0.

#2 - 2014-06-28 07:45 AM - Jürgen Fischer

- Target version changed from Version 2.4 to Future Release - High Priority

#3 - 2017-05-01 01:08 AM - Giovanni Manghi

- Easy fix? set to No

- Regression? set to No

#4 - 2018-02-27 07:41 PM - Harrissou Santanna

- Status changed from Open to Closed

- Description updated

- Resolution set to fixed/implemented

fixed in both 2.18 and 3.0
