Fix #10548 (crash using custom forms)

When using a custom UI file, the widget is created beforehand, and the code was failing to initialize it.

History

- *Crashes QGIS or corrupts data changed from No to Yes*

Reproduced today with 2.6.0 on ubuntu trusty 64bit

#4 - 2014-11-06 06:28 AM - Giovanni Manghi

- *Affected QGIS version changed from master to 2.6.0*

- *Subject changed from QGIS 2.3 crash using custom forms to QGIS 2.6 crash using custom forms*

#5 - 2014-11-27 06:24 AM - Giedrius Vaivilavičius

I have a similar problem. Using "Drag and drop designer" has made a form with different types of grounds but they are duplicated fields. Then QGIS crashes when I put the point. The terminal writes "Segmentation fault". When I eliminate fields that are repeated, then no crashes. QGIS 2.6, Debian wheezy, 64 bit.

Does this also affect master? I can't seem to reproduce it.

#8 - 2015-02-09 01:13 PM - Luca Lanteri

the original issue not affects the master. I also try the problem reported by Giedrius Vaivilavičius and all seem to works fine.

Maybe it's better to open a new ticket to update the affected version ?

#12 - 2015-03-04 02:54 PM - Jürgen Fischer

- Subject changed from QGIS 2.6 crash using custom forms to crash using custom forms

#13 - 2015-03-05 04:52 PM - Giovanni Manghi

- Affected QGIS version changed from 2.6.0 to 2.8.1

- Resolution deleted (fixed/implemented)

- Status changed from Reopened to Feedback

Comment 6 has been addressed, no more crashes when multiple multi line widgets are present.

Does the original issue concerning .ui files still apply to master?

Can you provide a demo .ui?

#15 - 2015-10-02 11:01 AM - Luca Lanteri

It's now ok on 2.11.0-Master tested on linux and windows.
