- Status changed from Open to Closed

Looks like it could be an upstream issue and a patch may be applied in about a week or so.

I'm not sure if pyqtconfig is going to be available anymore (for newer versions of pyqt4 anyways, especially if packages maintainers start to configure pyqt4 with the new configure-ng.py script instead of the old configure.py).

From [http://pyqt.sourceforge.net/Docs/PyQt4/build\\_system.html#the-pyqt4-build-system](http://pyqt.sourceforge.net/Docs/PyQt4/build_system.html#the-pyqt4-build-system)

Starting with v4.10, PyQt4.QtCore.PYQT\_CONFIGURATION is a dict that describes how PyQt was configured. At the moment it contains a single value called sip\_flags which is a string containing the appropriate -t and -x flags.

So instead of calling import PyQt4.pyqtconfig does that mean the QGIS configure needs to call PyQt4.QtCore.PYQT\_CONFIGURATION from now on?

**#3 - 2014-06-25 09:36 AM - Donovan Cameron**

@sip: Unable to find file "QtCore/QtCoremod.sip"

python/CMakeFiles/python\_module\_qgis\_analysis.dir/build.make:283: recipe for target 'python/analysis/sipanalysispart0.cpp' failed

```
[root@localhost ~]# find /usr -name QtCoremod.sip
```

```
/usr/share/sip/QtCore/QtCoremod.sip
```

```
[root@localhost ~]# pacman -Qo /usr/share/sip/QtCore/QtCoremod.sip
```

```
/usr/share/sip/QtCore/QtCoremod.sip is owned by python2-pyqt4 4.11-2@
```

Looks like it's having trouble finding some files during the compile stage. Build is failing on Master (2.3) too.

EDIT: The sip issue has been resolved after sip was updated, but the pyqtconfig issue looks like it'll remain for linux distros because it's been planned for deprecation.

**#4 - 2014-06-25 10:09 AM - Donovan Cameron**

Looks like the "QtCore/QtCoremod.sip" file issue is a duplicate of #8857

But the missing pyqtconfig python module is planned for deprecation now I think.
