

QGIS Application - Bug report #10634

WMS provider: Cannot calculate extent

2014-06-18 11:11 AM - dr -

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Web Services clients/WMS	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution: duplicate
Crashes QGIS or corrupts data:		Copied to github as #: 19037

Description

I have local MapServer-based WMS server which can send data in two SRS: EPSG:4326 and EPSG:3857. When I add layer using SRS EPSG:4326 all works fine, but when I try to add layer using SRS EPSG:3857 I get error message:

WMS provider: Cannot calculate extent  
Raster layer: Provider is not valid (provider: wms, URI:  
crs=EPSG:3857&dpiMode=2&featureCount=10&format=image/png&layers=building&styles=&url=http://192.168.250.105/cgi-bin/wms?VERS  
/wms?VERSION%3D1.1.1

In QGIS 1.8 this WMS-layer works fine with both SRS.

Example of map-file:

## #2 - 2014-06-18 11:22 PM - dr -

I've fixed my problem by manually adding the following option for root MAP object of map-file:

```
EXTENT      3.27621e+06 8.31941e+06 3.42256e+06 8.45391e+06
```

In this case MapServer returns correct values of LatLonBoundingBox and BoundingBox of root Layer element of GetCapabilities response. But it is not clear for me why QGIS uses values of these options if values of LatLonBoundingBox and BoundingBox for each inner Layer element are correct?

## #3 - 2015-10-16 05:37 AM - Luis Fajardo

I have same problem with QGIS 2.4.0 on Debian 8 trying to add any of the following WMS services:

- [http://idecan2.grafcan.es/ServicioWMS/ENP\\_ORD](http://idecan2.grafcan.es/ServicioWMS/ENP_ORD)
- [http://idecan2.grafcan.es/ServicioWMS/Historico/MTI/MTI\\_2013](http://idecan2.grafcan.es/ServicioWMS/Historico/MTI/MTI_2013)
- <http://idecan2.grafcan.es/ServicioWMS/Planeamiento>

This is part of the capability response:

```
<SRS>EPSG:32628</SRS>
<SRS>EPSG:4326</SRS>
<SRS>EPSG:32627</SRS>
<LatLonBoundingBox minx="-18.4913" miny="26.582" maxx="-13.0688" maxy="30.4726"/>
<BoundingBox SRS="EPSG:32628" minx="164622" miny="2.94455e+06" maxx="685418" maxy="3.37115e+06"/>
```

Is it a problem with QGIS or should I complain for the server configuration?

In the while, dr, what do you mean with adding an option "for root MAP object of map-file"? What file should I edit? How can I add such an option?

Sincerely,

Luis.

P.S.: The following is the whole capability response I get from server:

```

#### #4 - 2016-07-13 03:13 AM - Matthias Kuhn

Happened to me with a QGIS server where the project title and the file name were different.  
Once the file was renamed, it would properly load.
