QGIS Application - Bug report #10720
QGIS server: embedded groups do not render in GetMap requests if leave layers are requested

2014-06-25 06:57 AM - Andreas Neumann

Status:	Closed		
Priority:	Severe/Regression

Crashes QGIS or corrupts data:		**Copied to github as #:**	19108

Description

When embedding a group from another project one gets a correct GetCapabilities / GetProjectSettings command that contains all layers, but when issueing a GetMap Request the individual layers of embedded groups cannot be retrieved.

Here is my project setup:

Project A:
Layers "Hello"
Layers "Country"
Embedded Group from Project B: "Hydrology"

Project B:
Group "Hydrology"
 --> Layer "Rivers"
 --> Layer "Lakes"

The GetMap that requests Hello,Country,Hydrology works fine, but not the one that requests Hello,Country,Rivers,Lakes

So it seems one can request embedded groups as a whole in the GetMap request, but not individual leaf layers that are individually addressed.
