<b>Affected QGIS version:</b>	2.2.0	<b>Regression?:</b> No
<b>Operating System:</b>	Windows	<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>	No	<b>Resolution:</b>
<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 19115
<b>Description</b>		
<p>Hi. I was having trouble using the R scripts after I had enabled the R script and set the path to R (version 3.1, 64 bit).</p> <p>I was trying to run e.g. Home Range Analysis -&gt; Characteristic hull method. It failed with the feedback that R was installed an configured correctly but that adehabitathr and deldir was not loaded. Both packages has been installed and are know to work.</p> <p>In the log window in the background i noticed that there was a writing permission denied message and after fixing the writing permissions in windows the scripvt started working.</p> <p>Maybe that workaround should be included in the manual?</p> <p>Best regards,</p> <p>Nicolai Jorgensen</p>

Some providers are being removed from QGIS/Processing (will be available as plugin) and so are their categories in the bug tracker. To not leave them orphaned of a category they are being reassigned to processing/core.
